Dark Blue Varieties

Light Blue Varieties

Pure White Varieties

Any of the above, 20c each; \$2.25 per doz.; \$18.00 per 100

Roman Hyacinths

Raised indoors in bowls like Paper-White Narcissus.

Blue. 20c each; \$2.20 per doz.

Pink. 20c each; \$2.20 per doz.

White. 30c each; \$3.30 per doz.

Hyacinths are grown outdoors like tulips except that the bulbs should be set farther apart—about 8 to 10 inches. For house culture pot the bulbs any time from September to December, using a light, rich soil and bone fertilizer. Place the pots outdoors and cover them with 4 to 6 inches of leaves. After ten to twelve weeks they may be brought indoors a few at a time.

If Hyacinths are grown in glasses, the bases of the bulbs should barely touch the water. The glasses should be set in a cool, dark place until they are full of roots.

Parrot Tulips

Large flowers with fringed petals, especially attractive in a rock garden. Plant the bulbs about 3 inches deep in light soil in a sunny location.

Blue Parrot. 30 in. Bluish heliotrope flowers of huge size, with lacinated edges. \$1.75 per doz.; \$12.50 per 100.

Botanical and Species Tulips

Particularly fine for rock gardens.

Kaufmanniana. Dwarf. Large, creamy white flowers tinged rosy red; center canary-yellow. Nice for planting in the shelter of large rocks or under shrubs or trees in the border. \$1.25 per doz.; \$9.00 per 100.

Madam Lefebvre (Red Emperor). Enormous, fiery scarlet flowers with black base bordered yellow. \$1.75 per doz.; \$12.50 per 100.

NARCISSUS or DAFFODILS

We have been successful in securing bulbs grown under highly favorable conditions. The brilliant blooms appear from March until well into May. The early blooming period and their handsome appearance, whether in large masses or as individual flowers, make them perhaps the most popular of all spring-flowering bulbs. Plant the bulbs 4 to 6 inches apart and cover them to one and one-half times their depth. Bonemeal makes an ideal fertilizer; fresh stable manure should never be used.

HOW TO MAKE A LAWN

To prepare a good lawn you must have seed of the proper kind and use plenty of it. You cannot make a beautiful lawn with ordinary hay seed. Next in importance is the proper preparation of the soil. Spade or plow it to a depth of at least 6 inches. Fertilize freely and make the surface fine, free from clods, and perfectly level, avoiding uneven spots.

When planting in the fall, sow before the autumn rains have ceased. In the spring sow the seed as early as possible, after raking the surface of the soil very fine. Cover by rolling with a light roller of not more than 200 pounds.
